**GOOGLE PLAY**
**APP STORE**

# MoneySnake

A new version of a good-known game - now with a full multiplayer support, a mobile version and all-new gameplay!

# Finlandia AR Web APP

We developed an innovative web application using AR technology. What makes this development unique is that the AR comes to life immediately a!er the marker is scanned, without  having to install the application

It is an innovative way of promotion the product which takes the consumer interaction to a new level of involvement.

# AR APP for Cosmia  makeup brand

We’ve
developed an innovative mobile app based on the face-  recognition engine
that enabled the implementation of AR technology. By request of Auchan head office, the application was
adapted to work in 13 countries where the brand is represented
This application helped to increase brand awareness and clients'  loyalty that had resulted in sales growth.

# Fox 3D Animation

It was decided to create a teaser and conduct a survey among  children. The main task was to realize the fox character, which we successfully coped with.

# MOYO

**Website**

MOYO is a world of pleasant
impressions, where every visitor receives positive emotions at the expense of a
high level of service and a fundamentally new format of service.
The team
has refactored around 30% of the project, has formed transparent workflow with
product department during first 3 months of their work.
•We’ve
organized a separate unit for the team, prepared workplaces and set up the
infrastructure
We’ve
recruited basic team (6 people) swiftly within one month and the remaining
specialists within second one.

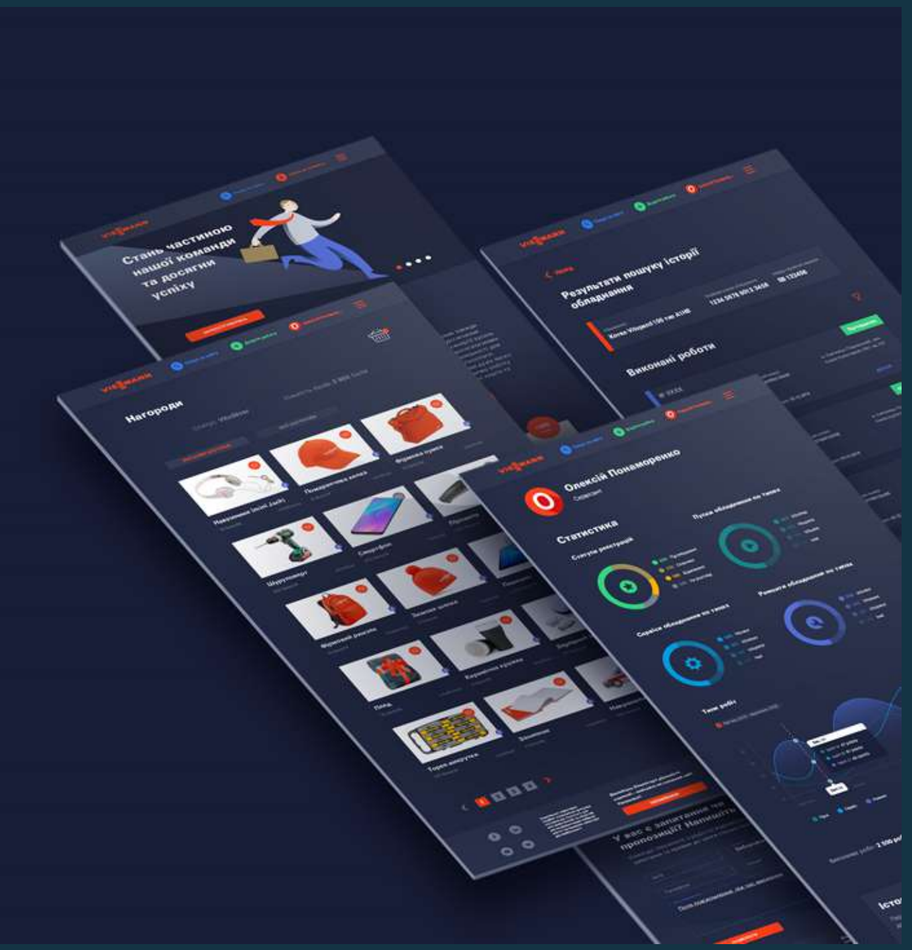
Defence-reforms project.
This site is dedicated to the reforms of Armed forces of Ukraine. It describes the top priorities, plans and programs to implement changes, as well as publishes their progress reports. Now everyone can observe how these reforms progress.

**Website**

Global-e
envisions a world where international ecommerce growth is both simple and profitable for retailers. By connecting people with brands worldwide, Global-e creates a boundless ecommerce world in which selling globally is as simple as selling locally.

**Website**

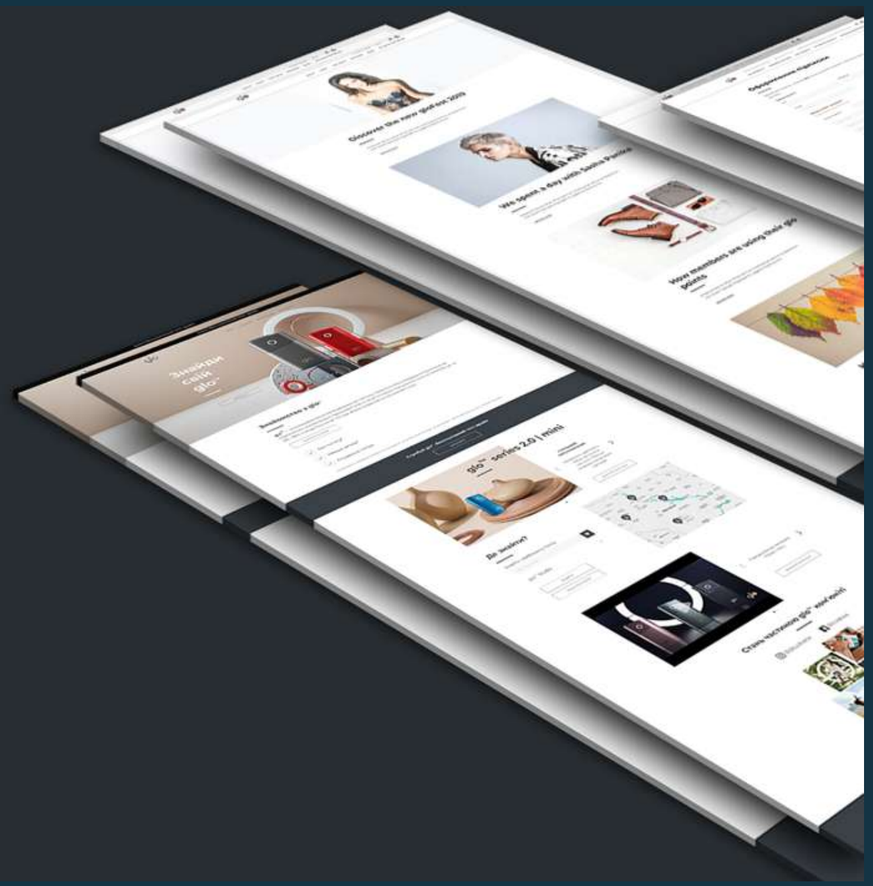
# Viessmann



A single cabinet has been created for all partners, which allows them to register reports on completed work, linking these reports to a single database of company products

A catalog of products has been created for which the partner can exchange their accumulated bonuses
A feedback module has been implemented to ensure communication between partners and managers

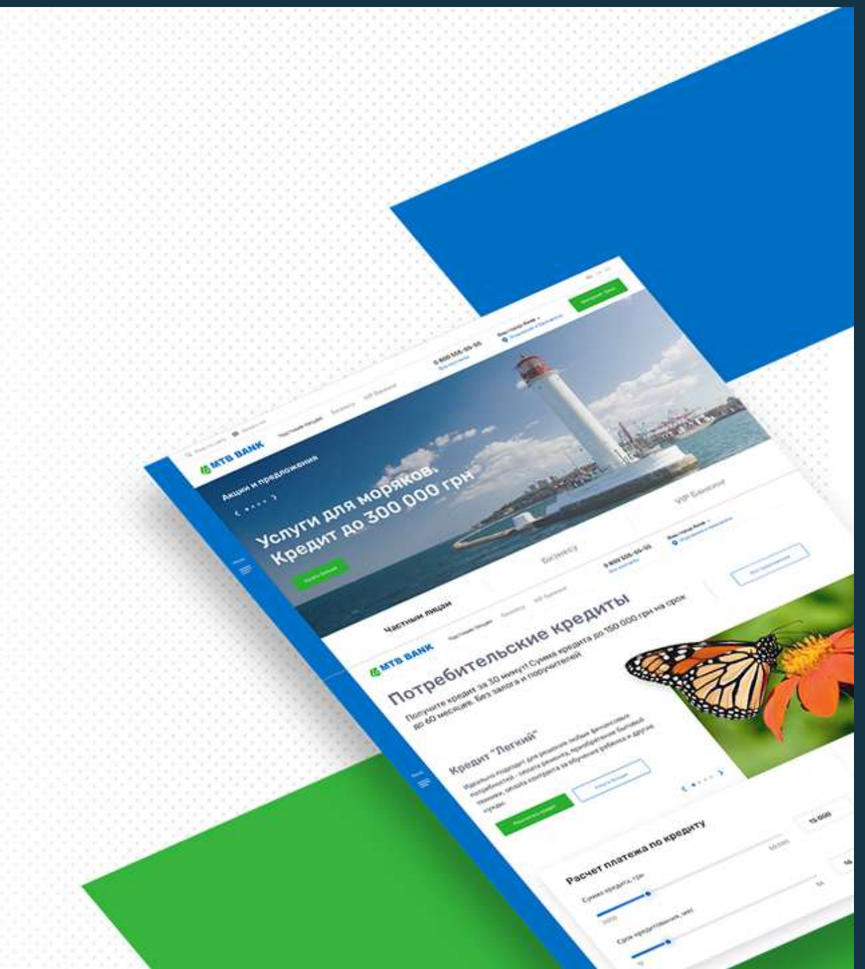
# British American Tobacco



- Automate integration and interaction with external platforms
- Change the e-commerce interface of the glo platform
- Automate the generation and sending of reports in the system

Optimized many manual processes. Data duplication in reporting systems is excluded, the relevance of stored data in the system has increased

# Mtb bank



Development of a new project for MTB Bank, consisting of a corporate website and an internal system for processing incoming applications through the website.

Tasks:

Analyze ideas, develop service prototypes

Describe user story

Develop a system for collecting and processing applications

Make a financial configurator system

Set up content management

Result:

Support desk optimization

Up to 100 applications for bank products are generated daily through the website
